For years, my people have waited for the day that the Elder God will come to visit us. Our strength may have weakened after decades of faith, but I have never been afraid to speak the truth to the leaders. I was right. The Elder God has returned, to destroy us all. It's my duty to warn the leaders, but there is only one person I am willing to spare. It is the last person I would ever want to protect. Her name is Little Walker. At ten years old she escaped the Doomwiths with her parents. She is a child, and the only reason she is still alive is because my people decided to let her live. I will protect Little Walker, no matter what. She is far too young to be a guardian. If I fail to protect her, I will lose my standing with my people. The Elder God will take me. I will never know what happened to Little Walker. Play as an adult or as a child. Note: The link above will open the file with a Google Drive login. Setting up OpenGloves takes only one button press, but you get to play immediately. To begin with, you'll select a Playground Mode. There you can define the field of view of your VR headset (by default 45 degrees, 180 or 360). Secondly, you set up how large the hand and the fingers will be. For the hand, you can choose one of the predefined sizes or create one yourself. After that, the hand gets scaled up to the proper size. All the degrees of freedom of your hand and its fingers are specified in the right bottom corner. Then you press the Apply button and start playing. You can click, hold and press buttons on the controllers or on the mouse to control the glove. Just like normal VR, you can direct your view wherever you want with your head. If you want to inspect the data coming from the drivers, you can select one of the protocols below. It will be re-calibrated for the selected protocol. But you can always use the default for USB/Bluetooth/NamedPipes as well. I'm very happy with the driver, as it works great and is extremely powerful. I am a professional developer (which is why I know a little bit about writing drivers) and I couldn't have been happier with how easy it was to write this driver.
